

The OpenVino® Project

Contact: openvino@costaflores.com

Welcome!

"As advances in technology rapidly transform our world, the wine business, often perceived as an arcane mix of immutable tradition and arbitrary complexity, will not be exempt. The OpenVino® Project seeks to revolutionize the way wine is thought about, sold, and consumed. We are actively seeking participants from the technology and wine worlds and the press to explore new ways to talk about organic viticulture, transparency and ethical business practices, blockchain trading technologies and new models of ownership and value assessment. Whether your interests lie in wine, technology or business; organic viticulture, cryptocurrencies or product distribution, we invite you to explore The OpenVino® Project."

- [Overview of The OpenVino Project v1.0](#)
- [Requirements Definition](#)
- [Architecture Specifications](#)
- [Implementation Plan](#)
- [Test Plan](#)
- [Control Plan](#)
- [Operational Baseline](#)

What is the OpenVino® project?

OpenVino® is an experimental collection of open-source software packages, business processes and designs, currently under construction by a global team of idealists. Openvino is not a company, and we are not developing products to be commercialized in the future. While the first implementation of Openvino is being built for the [Costaflores](#) boutique winery in Mendoza, Argentina, we hope our experiments will be freely adopted and modified by other wineries and businesses. [Here is an in-depth project overview.](#)

What are the objectives and requirements?

Here we have laid out our project objectives and requirements in [6 information silos](#).

- 1) Growing the Grapes – all things about organic viticulture
- 2) Making and Delivery the Wine – from the crush and bottling, to storing, shipping and exporting.
- 3) Managing the Business – general accounting, inventory, financial, personnel, taxes
- 4) Selling Wine-backed Cryptocurrency – using the blockchain to build customer-defined pricing
- 5) You Drink It, You Own it – how customers respond to their drinking experience
- 6) Telling our Story – Getting the word out

What is our technical architecture?

Here are the [pieces](#) we are putting together, and here is the [cookbook](#) we are writing as we go forward.

How is the OpenVino project managed?

Loosely, but here is concise [project methodology](#).

How can I get involved?

After you have read our documentation, let us know where and how you would like to collaborate. Send a message to openvino@costaflores.com

Events

- [Organic World Congress](#), New Delhi, 10 November 2017
- [Ethereum Conference](#), Paris, 8-10, March 2018
